Back Pain? Sciatica?

Discover Proven Back Pain Treatments and Cures That You Won't Hear About From Your Doctor In My Brand New Book...

*Get Your Copy **FOR FREE** For A Limited Time...*

Get relief from back pain, regain your independence and take back your life **with proven back pain treatments and cures.**

Doctors **only treat the symptoms** with addictive and dangerous prescriptions.

Physical Therapists and other health professionals only treat the pain, usually with painful exercises...

Treatments and cures that start with your underlying body structure and the true cause of your pain are **simply not an option for Doctors or Physical Therapists.**

The “7 Day Back Pain Cure” book is the **antidote to the surgery-obsessed**

approach to back pain.

Based on over 2,000 hours, of research and supported by The Healthy Back Institute Medical Advisory Board, I've uncovered **treatments & cures** that go beyond prescriptions and devices, that are **only revealed in this breakthrough book**.

You most likely will **NEVER** need back surgery if you truly follow these treatments and cures faithfully!

In “**The 7 Day Back Pain Cure**” book you'll discover...

5 “Hidden” causes of back pain that **you won't hear about from your doctor...** Page 51

The real reason your **doctors do NOT have YOUR best interests at heart** (Warning: This “hush-hush” doctors-only secret is something your doctor will not (and can't) ever admit to!)... Page 43

3 Breakthrough **New Treatments** that deliver fast and lasting pain relief in as little as 60 seconds... Pages 213-216

Let's uncover a few **Back Pain Myths** and start with **some information you**

Pain Is Only a Symptom

Pain. It's a powerful word that creates strong feelings. Think back to the last time you experienced pain. If you're like most people, you probably remember some event that caused it—a paper cut, a sprained ankle, or a skinned knee.

Most people believe that back pain operates the same way - that it's caused by some isolated event. They “throw out” their backs, for instance, experience pain, and then have a back-pain problem. Since the pain happened rather suddenly, they imagine that if they can get rid of the pain, they'll get rid of the problem.

Like many things in life, the real story is more complicated. **Back pain is just a symptom** that can be caused by many different things.

Two people can feel the exact same type of back pain for two entirely different reasons.

If they were both to undergo the same treatment, one may start to feel better

but the other may not. **It all depends on why the pain exists in the first place.**

Let's say you have a dog, and one night that dog comes in whining. You know he's in pain, but you don't know why. Pain is just a sign that something is wrong.

Next, you may notice he's limping, which is a good sign that the pain is probably in his leg somewhere, but you still don't know what's causing it. To find out, you need to do some investigating.

Most likely, you would call your veterinarian and work toward finding a solution. You would not, in most cases, give the dog a pain reliever or a massage and then forget about it. Even if your dog felt better the next day, most likely you would still want to be sure his leg was all right. Unfortunately, you might not treat yourself with the same care.

Many traditional back-pain treatments focus primarily - if not exclusively - on just getting rid of the pain.

In the process, **they fail to identify the underlying cause of that pain.** Of course, it's great to have pain erased or, at least, diminished. But **easing the pain without solving the problem means one thing - the pain comes back.**

That's why a lot of people seem to frequently "throw out" their backs and experience persistent, recurring back pain.

Pain Is a Message... So Listen!

Pain is your body's way of telling you that something is out of balance, or "messed up" in some way. That may not be the technical term doctors use, but it's the most accurate one I can think of!

Through pain, your body is trying to send a message that something is wrong and it needs help. When the message is silenced but the underlying problem is ignored, the communication has failed. Consequently, your body starts to "yell" louder by giving you more pain - recurring and more severe pain.

Your body is trying to tell you something, but you aren't listening!

The Three Big Myths About Back Pain

What I want to emphasize here is that we can't just focus on symptoms like pain. Instead, we must turn our efforts toward figuring out and fixing the underlying problem causing the pain. Before I explain the primary causes, however, let me start by dispelling a few popular myths.

Myth #1: You "Throw Out" Your Back

In the course of my work, I've taught hundreds of thousands of people my back-pain treatment approach. When I ask them what's wrong, they almost always say something like, "I was doing X when I 'threw out' my back."

Usually, some physical activity precedes the back pain, like picking up a heavy object, sneezing, bending over, or getting out of bed. The thinking goes, “Well, since I didn’t have pain before the activity, the activity must have caused the pain.” As you’ll see in the next few chapters, the reality is a bit more complicated. In many cases, a physical activity can trigger a pain episode, but by itself, it isn’t the underlying cause.

Consider this example: Let’s say you fill a room with natural gas and then toss a match inside. You could say that the match caused the explosion, but it would be more accurate to say the match “triggered” or ignited the explosion. The better question to focus on is “Where did all that gas come from in the first place?”

It’s very similar with back pain. A physical activity can trigger a pain episode, but it’s not the “fuel” behind it. If you don’t get rid of the underlying problem, then any number of things can “trigger” the pain.

Myth #2: Back Pain Means Something Is Wrong with the Back

People usually think that if they have back pain, their bodies are suffering from some mechanical dysfunction. “Since my body hurts,” they say, “it must mean something is wrong with my

body—something with the bones, the muscles, or the soft tissue that connects them.”

While this is sometimes, if not often, the case, it’s not the only underlying cause of back pain. Other factors that originate in your mind (e.g., stress levels) as well as your diet (unhealthy foods) can cause severe back-pain episodes, even when there’s nothing wrong with your spine, discs, joints, muscles, or ligaments. These factors also can exacerbate physically caused back pain, making it many times more painful.

Myth #3: The Current Pain Isn't Related to Previous Bouts

If you experienced a back-pain episode two months ago and another today, you’re likely to think these episodes are unrelated. Perhaps the last time it

happened because you sneezed. This time you were moving furniture.

For most people, the trigger that causes their pain episode is different on different occasions. Naturally, they associate the “cause” to the trigger and believe the episodes are unrelated.

In fact, in the vast majority of cases, multiple back-pain episodes are usually caused by the same underlying problem— even if each pain episode had a different trigger.

Let’s consider again the room filled with natural gas—a dangerous situation, no doubt. But the gas is the source of the danger, not the match, static cling, or a cell-phone ring that might create a spark to trigger the explosion.

The same is true when it comes to back pain. Once you’ve created conditions in your body, inadvertently or otherwise, that are ripe for an explosive bout of back pain, any number of things can set off a pain episode. Different activities that may trigger pain are only sparks igniting the gas that was there all along.

There Are Two Types of Pain: Which Are You Suffering From?

Though there are many back-pain conditions, such as sciatica, scoliosis, and a herniated disc, we can narrow them down to two basic categories: nerve-based pain and tissue based pain.

You may have one or the other, or you may have both. Some treatments will ease nerve pain, others improve

tissue pain. Some might, in some cases, work for both. But determining the right treatment for your particular case can require some investigation.

This is, incidentally, why so many back-pain sufferers find inconsistent relief. Let me explain the differences between the two types of pain.

As the name suggests, nerve-based back pain is caused by a nerve that's not happy for some reason. Typically, it's being pressured, pinched, compressed, or injured in some way— usually by a nearby muscle or bone.

For example, if a nerve is surrounded by or next to a muscle that's unusually tight and inflexible, that muscle presses on the nerve, causing it to hurt. This is common in sciatica.

If a nearby piece of bone, such as a vertebra in your spinal column, is out of

position, it also might press on the nerve, causing pain. These bones themselves may be out of position due to an overly tight or inflexible muscle nearby. In other words, the whole process may start with a tight muscle but end with a nerve that's irritated by a bone.

Nerve pain often, but not always, is felt as a burning, tingling, sharp, shooting, electrical, or numb sensation, or like "pins and needles."

Tissue-based pain, on the other hand, originates in the muscles, tendons, ligaments, or other connective tissues in the body. (Most commonly, the pain originates in the muscles.) Think back to the last time you gave someone a neck or back massage. You may recall feeling one or more "knots" in the muscles. These knots are one of the main causes of tissue based pain.

One way to tell if a knot is really a knot, or just a bone, is to see if it exists on both sides of the body in the exact same position. If it appears on both sides, it might be a bone or part of a joint. If it only appears on one side, it's more likely a knot.

This knot is more formally known as a "trigger point." I don't know why it's

called this, but I suspect it's because if you press firmly on it, it triggers pain. Trigger points also are known to trigger pain in areas of the body other than where they're located, and this is called "referred pain."

A trigger point is caused in part by a pooling of toxins in your muscle tissue—which, in turn, is usually caused by imbalances in your diet, excess negative stress, and/or damage to the actual muscle fibers as a result of an injury and/or excessive exercise or physical activity.

If you're under a lot of stress, for example, your body's natural tendency is to shift to more shallow breathing and to "freeze" parts of your upper body (clenched jaws and tense shoulders are a few examples).

This "freezing" reduces the amount of oxygen in your body and slows the circulation of blood in certain areas—such as your back. Without the optimal level of oxygen from deep breathing and without natural body movement to keep the blood flowing, toxins get "stuck" within tight muscle tissue. If this is allowed to continue for a long enough period of time, a trigger point develops, causing pain.

Trigger points also might be caused by an imbalance in the diet. For instance, many people who have been led to believe they aren't getting enough calcium may, in fact, be deficient in magnesium. Without magnesium, the body can't process calcium as it should. Magnesium also is involved in the muscle-relaxation response, so if the body doesn't have enough of it, trigger points are more likely to develop.

Since proper muscle function depends on both of calcium and magnesium—

and since they depend on each other for absorption into the body's cells—an adequate, balanced supply (along with potassium and other trace minerals) is necessary for healthy, pain-free muscles.

Studies have shown that supplementing with these nutrients can help ease trigger points.

Another way to really aggravate trigger points is to drink too little water. When you're dehydrated, your blood doesn't have enough fluid to flush out all the toxins and other biological waste that your body produces. Under normal conditions, the blood washes away all these waste products, moving them to the liver and kidneys, where they are

eliminated from the body.

But if you're even slightly dehydrated, there isn't enough water in your blood to do a good cleaning job in the little spaces between the cells that make up your muscles. When this happens, you're much more likely to develop trigger points—or if you already have them, they increase in size, severity, and pain.

Other types of tissue-based pain, such as pulled or strained tendons or ligaments, also can be caused by overuse. While a sudden trauma or injury can pull a ligament—a very extreme form of overuse—doing the same type

of moderate-intensity activity too many times can strain a tendon or ligament, too.

There is a fine line between using and overusing your tendons and ligaments.

Notice how similar types of sharp, shooting pain—a trigger point in the muscle, an inflamed tendon, or a compressed nerve—can be caused by entirely different reasons. As you'll see in the next chapter, this is quite common. You also will see that if you don't know what's causing your pain, you could very easily choose the wrong treatment approach!

You may already have an idea which type of pain you have. If not, you'll figure it out as you go through this book. For now, just remember that you need to know what's causing the pain before you can reasonably expect to get rid of it.

The Five Causes of All Back Pain

As I mentioned earlier, most people think they “throw out” their backs and then experience back pain. While you now know that this isn't the case.

All back pain comes from one of three sources and these are almost always overlooked by doctors and other health care professionals.

In the 7 Day Back Pain Cure Book, **which you can get for free**, we'll go into greater depth and cover how you can get true lasting relief from your back pain and so much more...

Time Is Of The Essence

Here's why.

I've ordered a small batch of 2,000 copies of this book. They are packaged

up and ready to be shipped immediately.

In all likelihood, they'll sell out almost instantly.

Why?

Because the last time I sold this through several bookstores, it sold 18,500 copies in a few short weeks.

So it's simply a matter of supply and

demand.

You see, this book was previously sold at bookstores. But in order to reach more people, I recently printed a very small batch of 2,000 copies, on my own, through a local printer, costing me \$4.93 each.

So to get this book to you, it's costing me \$9,860.00 to print all 2,000 of them. If I paid shipping on top of that, it would be another \$11,900.00 (and that's just for U.S. shipping) I quite frankly can't afford \$21,760.00 right now.

Sure, I could just make this book available as a PDF download. But you see, the reason why I'm willing to spend as much as I can afford \$9,860.00 to get this book in your hands is that I find that those people who are willing to pay shipping and read my book, usually buy one or more of my other products and then I have a customer for life.

So all I ask is that you pay a small shipping fee, and I'm still losing money on this deal, especially, if you don't buy anything else from me later.

Here's What To Do Next

Like I said, the book is free. All I ask is you cover the postage of \$5.95 inside the USA.

I'm using USPS and their flat rate for a book this size is \$5.95 shipped anywhere in the United States. If you're out of the country, shipping will be \$9.95.

As soon as you request it, we ship it to you. (Unless it's in the middle of the night, and then we'll do it in the morning.) We'll also email you with your shipping information.

You can expect to get it in about 7-10 days.

Thousands Are Now Pain Free... Will You Join Them?

Relieved my back pain!

"I wish that I had found this book earlier. It has helped me more than the pain management doctor.

I really did not want to manage the pain - I wanted rid of it and wanted to get back to my normal activities.

The exercises have helped greatly.

I am pleased with my progress and continue to exercise, watch what I eat and take NO pain medicines.

Disclaimer: This is a real success story from an actual customer. Your individual results may vary.

A must read book

"I first had back pains in 2000. It was clear what the trigger point was. Yet I self-limited to physiotherapy which only reduces the pain but does not resolve the root cause of the problem. For 11 years I have been coming and going. Now thanks to Jesse I know what to do.

I have a clear path to success. I said path, not pathology because muscle balanced therapy is ahead of me to live the life of my dreams"

Jorge Zuazola

7-DAY BACK PAIN CURE

I thought I had read everything on back pain. Not so.

This book has so much information on every thing to do with back problems, including what to do immediately for pain.

Most important to my mind are the clues on finding the causes and what to do about them.

Anyone with any kind of pain in the back would do themselves a huge favor by reading this book."

F. Peck, BC Canada

19

Finally!

"I was thrilled to read a book that actually gave honest and useable info. I had been to two doctors/ specialists and had a battery of tests run only to be told there was no answer to my recent back issues and that it may be stress. I knew there was more to it.

Within a week of reading the book I am pain and incident free. I will use the info and

special stretches and exercises for years to come."

L. Pai

I No Longer Have To Be Careful To Avoid Pain

After injuring myself overtraining for a marathon as a seventeen year old I ended up severely damaging nearly every ligament from my hips down. The doctors said to not run again for at least two years. However, the injuries never properly healed and I suffered constant but manageable pain. A few years later I started having back pain and five years ago I had an x-ray of my back done and what it revealed was a back twisted like a pretzel. By this time I was eating eight Mersyndol each night just to get two-hours sleep. I started receiving treatment

with a chiropractor, which made a big difference. Most days I would feel only low-level pain and experience severe pain a couple days before my regular fortnightly appointment, but I couldn't sit for long periods. On plane trips between Perth and Melbourne I would spend most of the flight standing in the aisle. Since starting to use Heal-n-Soothe, Rub on Relief, Lose the Back System, 7-Day Back Pain Cure Book and the Freedom Back the pain stopped. Within a couple days it reduced significantly, and a couple of weeks later it was just gone. A month later I flew to Guangzhou from Perth and sat in an economy class seat for eight hours comfortably. Even on the flight back with an injured shoulder I slept soundly. These days my chiropractor is astounded by the change, and the careless ease with which I move around. I no longer have to be careful to avoid pain. It has now been six

My Condition Continues To Improve

"I purchased the 7-Day Back Pain Cure book a couple of years ago but, sadly, never even opened it as physical therapy made my pain subside to a manageable level. I had a recurrence last week that completely disabled me and after five days I remembered the book, I was getting desperate! I am able to start the exercises after only one day of drinking proper amounts of water and applying heat. I will be following the entire program to its completion this time. I have learned my lesson. My condition continues to improve as I stick to the plan. It does take a bit of discipline to stay the course when the pain starts to diminish but I am committed to solving my back issues once and for all this time around. I have every intention of purchasing Jesse's "Lose The Back Pain System" too. Thank you for this opportunity to be free from back pain after many years of just getting by and repeated injuries and periods of recovery. I wish I had more copies to give my brothers because I am unwilling to part with mine!"

Jeff Winders in Corvallis, Oregon

Disclaimer: This is a real success story from an actual customer. Your individual results may vary.

weeks since my last chiropractic appointment and I still feel great.

Dale Hartley in Joondanna WA, Australia

My Mid-Back Pain Stopped After The First Week!!!

I've been having mid-back and/or lower back pain for several years now. I came upon Jesse's book a couple of years ago, and purchased the inversion table which helped me immensely. A few months ago I started having pretty bad mid-back pain and about two weeks ago I purchased Jesse's program. I did the assessment and I started to work on the muscle imbalance and stretching. My mid-back pain stopped after the first week!!! I am working on this program daily so my muscle "forget" the bad habits, they become stronger and more elastic. I'm combining this with inversion table and I'm pretty sure that in the next few months I'll regain the strength, elasticity, balance my body needs. Thank You!
