I started taking Serrapeptase about 10 months ago as it is suppose to reduce inflammation and help clean and renew damaged arteries. The result has been that my blood pressure has been reduced from 155/98 to 98/68 which is telling me that my arteries are starting to be flexible again.

I have used Serratia Peptidase 100mg to treat swollen gums, after a crown placement, which left the gums around the crown red, inflamed and sore. I have taken one tablet, 100mg for three days, on an empty stomach, first thing in the morning. I increased the dose to two tablets for one week following the three days. My gums and sinus swelling has improved noticeably. I still have a little swelling in an other area of my mouth. I will stop this treatment for the next few days, and see if the improvement remains. I do not wish to over dose on this supplement. I notice I feel sleepy, still alert, but somewhat tired. I cannot say for certain if the supplement is the cause of the drowsiness. I had terrible pain on both of my shoulders after car accident,I've been getting chiropractor therapy for 2 years but I'm not getting any better,massage for about 6 months had started to help but after I lifted something heavy I got worse,and that is when I learned about serrapeptase,from the first time my pain was completely gone ,I'm taking 160,000 units 3 times a day on empty stomach ,no side effects,I was concerned about taking a high dose but there is a nutritionist online that recommends taking up to 30 pills a day and he says is safe,I'm taking dr's Best ,4 pills 3 times a day, is only half of his recommendation.I also have heel pain but it does not help for that,maybe a higher dose but I'm a little nervous about safety,in about a month I will stop taking it to see if pain comes back. So far is working like a strong pain pill.[Read More](#) [Read Less](#)

I tried serrapeptase because I had bleomycin for chemo and my lungs don't open as well, serrapeptase gives me hives, red spots on my arms, elbows, legs,neck that come to a head and itch, when scratched they issue clear fluid, rt. lower leg developed cellulitis, lt. lower leg developed bright red rash, conditions slowly went away when serrapeptase was discontinued.

I had severe sciatic pain from my lower back down my right leg to my toes for over 2 months. Ibuprofen helped with the pain but finally someone recommended I take Serrapeptase which I had never heard of. On the 4th day of taking Serrapeptase my sciatic problem completely disappeared and has not returned for nearly 2 years. I still find it incredible as I had tried every treatment I could learn about, including prolotherapy. I have since recommended to 2 others with a similar condition and they both experienced a cure for their sciaticus though it took 5 days. R E Helmer/Eagle,AlaskaRead More Read Less

I have been taking Serrapeptase for a month now. Within the first week my chronic back pain was down about 80%. After a month there is a shadow of the pain that I used to have all the time. I'm very happy with the results

I am not sure about WebMD's description that serraptase "breaks down protein." Actually, it breaks down FIBRIN (dead tissue); fibrin, to my knowledge is not protein. Works fantastic for Restrictive Lung disease due to surviving Adult Respiratory Distress syndrome and other severe pneumonias. Increases breathing capacity after 6 mths minimal use, by decreasing fibrous collagen that has encased lungs due to healing of original illness.
